HIGHLIGHT

UX researcher and behavioral scientist with 6+ years designing and running large-scale experiments and translating behavioral and telemetry data into product decisions. Experienced across the full research lifecycle for consumer and enterprise products, with deep expertise in causal inference and predictive modeling. Currently completing a Social Psychology PhD focused on human–AI interaction.

WORK EXPERIENCE

User Experience Researcher Sept 2020 – Present
University of Toronto Toronto, ON

- Designed and ran an 8-week randomized controlled trial (N > 500) with weekly longitudinal tracking, a full experimentation pipeline from hypothesis and instrumentation through analysis, measuring the behavioral and psychological effects of sustained AI social chatbot use.
- Built predictive models (LASSO, SEM, multilevel modeling) that turned complex behavioral data into decision-ready findings across 10+ studies and 9 peer-reviewed publications.

User Experience Researcher Jun 2025 – Sept 2025
Slack San Francisco, CA

- Led mixed-methods research on adoption of Slack's native AI features (Search, Summaries, Recap, Translations), combining surveys, interviews, and behavioral/telemetry analysis to map user journeys from onboarding through sustained engagement.
- Conducted studies on engagement interventions, measuring downstream behavior change rather than surface-level click metrics, and translated results into growth recommendations.
- Built Slack's first user-segmentation model, turning raw, self-reported data into validated archetypes adopted across product, marketing, and sales to target underperforming cohorts.

User Experience Researcher May 2024 – Aug 2024
CIBC Toronto, ON

- Led 11 multi-study research projects across 3 divisions using journey mapping, persona development, analytics, user testing, and AI-driven methods to identify pain points and validate features, partnering with 4 design teams on new UIs that supported $5–50M+ in assets under management.
- Co-developed wireframes and prototypes that streamlined the Contact Us journey from call-center operations to sales, lifting user satisfaction by 20%.

Data Analyst Mar 2024 – Jun 2024
Besample Wilmington, DE

- Built a Python data-analysis pipeline grounded in behavioral-science principles that detected bots and low-quality respondents at scale with a 97% accuracy rate, safeguarding data integrity.
- Managed a PostgreSQL database serving 20+ users and automated feature queries that expanded KPIs from 3 to 15; built dashboards to monitor user-behavior and site-performance trends.

EDUCATION

University of Toronto PhD in Psychology Class of 2026
Queen's University HBSc in Kinesiology Class of 2020

SKILLS

- **Methods:** End-to-end UX research, usability testing, A/B testing, survey design, user interviews, journey mapping, persona development, concept & prototype testing, behavioral & telemetry analysis, segmentation
- **Platforms & Languages:** UserTesting, Maze, Dovetail, Optimal Workshop, Qualtrics, Figma/FigJam, Miro, Google Analytics, Adobe Analytics, Tableau | Python, SQL, R, MATLAB, bash
